## Current FDA reference notes

Public content-list reference update: September 30, 2026. This update changes the public PDF references only. The original document IDs, titles, package counts, product links and source control identifiers are retained.

FDA's Quality Management System Regulation (QMSR) took effect February 2, 2026. Under 21 CFR 820.10(a), manufacturers must document a QMS meeting the applicable requirements of ISO 13485:2016 and the other applicable provisions of Part 820.

**How to read the QMSR column**

**820.10(a)** identifies the general QMS framework. It is not a one-to-one replacement for a legacy QSR section.

**820.10(c)** identifies design and development requirements for devices within that provision's scope. Review device classification and applicability.

**820.35 / 820.35(a)** identify supplemental records and complaint-record provisions. Applicability depends on the records and activities involved.

**820.45** identifies supplemental device labeling and packaging controls.

**820.10(b)(1), (b)(3), and (b)(4)** point to UDI (Part 830), medical device reporting (Part 803), and corrections/removals (Part 806), respectively.

**A dash** means no FDA-specific supplemental citation is assigned here; it does not mean that all FDA requirements are inapplicable.

**Scope of this update**
The ISO clause column and any source appendix remain topical source guides; they have not been revalidated as a complete compliance crosswalk. These citations do not establish package completeness, regulatory compliance or certification. Confirm applicability and any additional requirements for your devices, activities and markets. Purchased ZIP files were not edited or audited in this update.
